

Tailor made mortgage software

Turning chaos into clarity

We help you take the risk, out of software

Established in 1999, Risk Free (UK) Limited creates the best financial services software solutions in the market.

About us

Our speciality is to provide systems that enhance our clients productivity and business levels. Our software is now used extensively in the financial services industry. We also have a highly skilled team of professionals who understand both the Financial Services industry and Technology, but more importantly how they fit together. Our core strategy is to simply deliver solutions to problems and help our clients grow.

What we do

Technology only tends to be 1/3 of a typical clients business. Without sales, marketing, back office and admin, technology is nothing.

We simply create the technology that allows your back office and sales operations to gain a massive competitive advantage.

“Risk Free offered a best of breed lender solution”.

Peter Lamberti, SAP

What we have done elsewhere

- Many of our clients are now automatically processing new web enquiries, instead of having to manually re-key in information after an enquiry has come in. We help to automatically import this information into the back office system, thus saving valuable time.
- We have allowed companies to farm existing data they have built up over many years, and send marketing material out via email/letter/fax, instead of hunting for new business which tends to cost more money.
- Automation is a core method we use to allow our clients to gain a competitive advantage. In a competitive market, some companies choose to ignore technology at their peril. With more automation, you should be able to spend more money and time on sales and marketing staff.
- Paperless office systems are not just green, they eliminate wasted time, plus the need for filing cabinets and masses of paper storage some of which ends up being misfiled. For many of our clients everything is now stored in one easy to find centralised database.
- Sending documents via automatically generated emails with PDF attachments, saves our clients money on postage costs.

Our solutions

Mortgage Processing System (MPS) is a revolutionary system aimed at lenders. We have designed our software to help our clients massively increase productivity and help them to increase their profits.

Our software is different because we have developed a core frame work, that we tailor to our clients exact needs. This gives our clients a system that is not just cheaper, but more importantly automates the jobs that could and should be automated and also works the way our clients want it to work, rather than our clients having to work around the software.

“I’ve seen a lot of software systems in my long career, but nothing comes close to Risk Free’s software”.

Eileen Cassin, Operations Director MTG

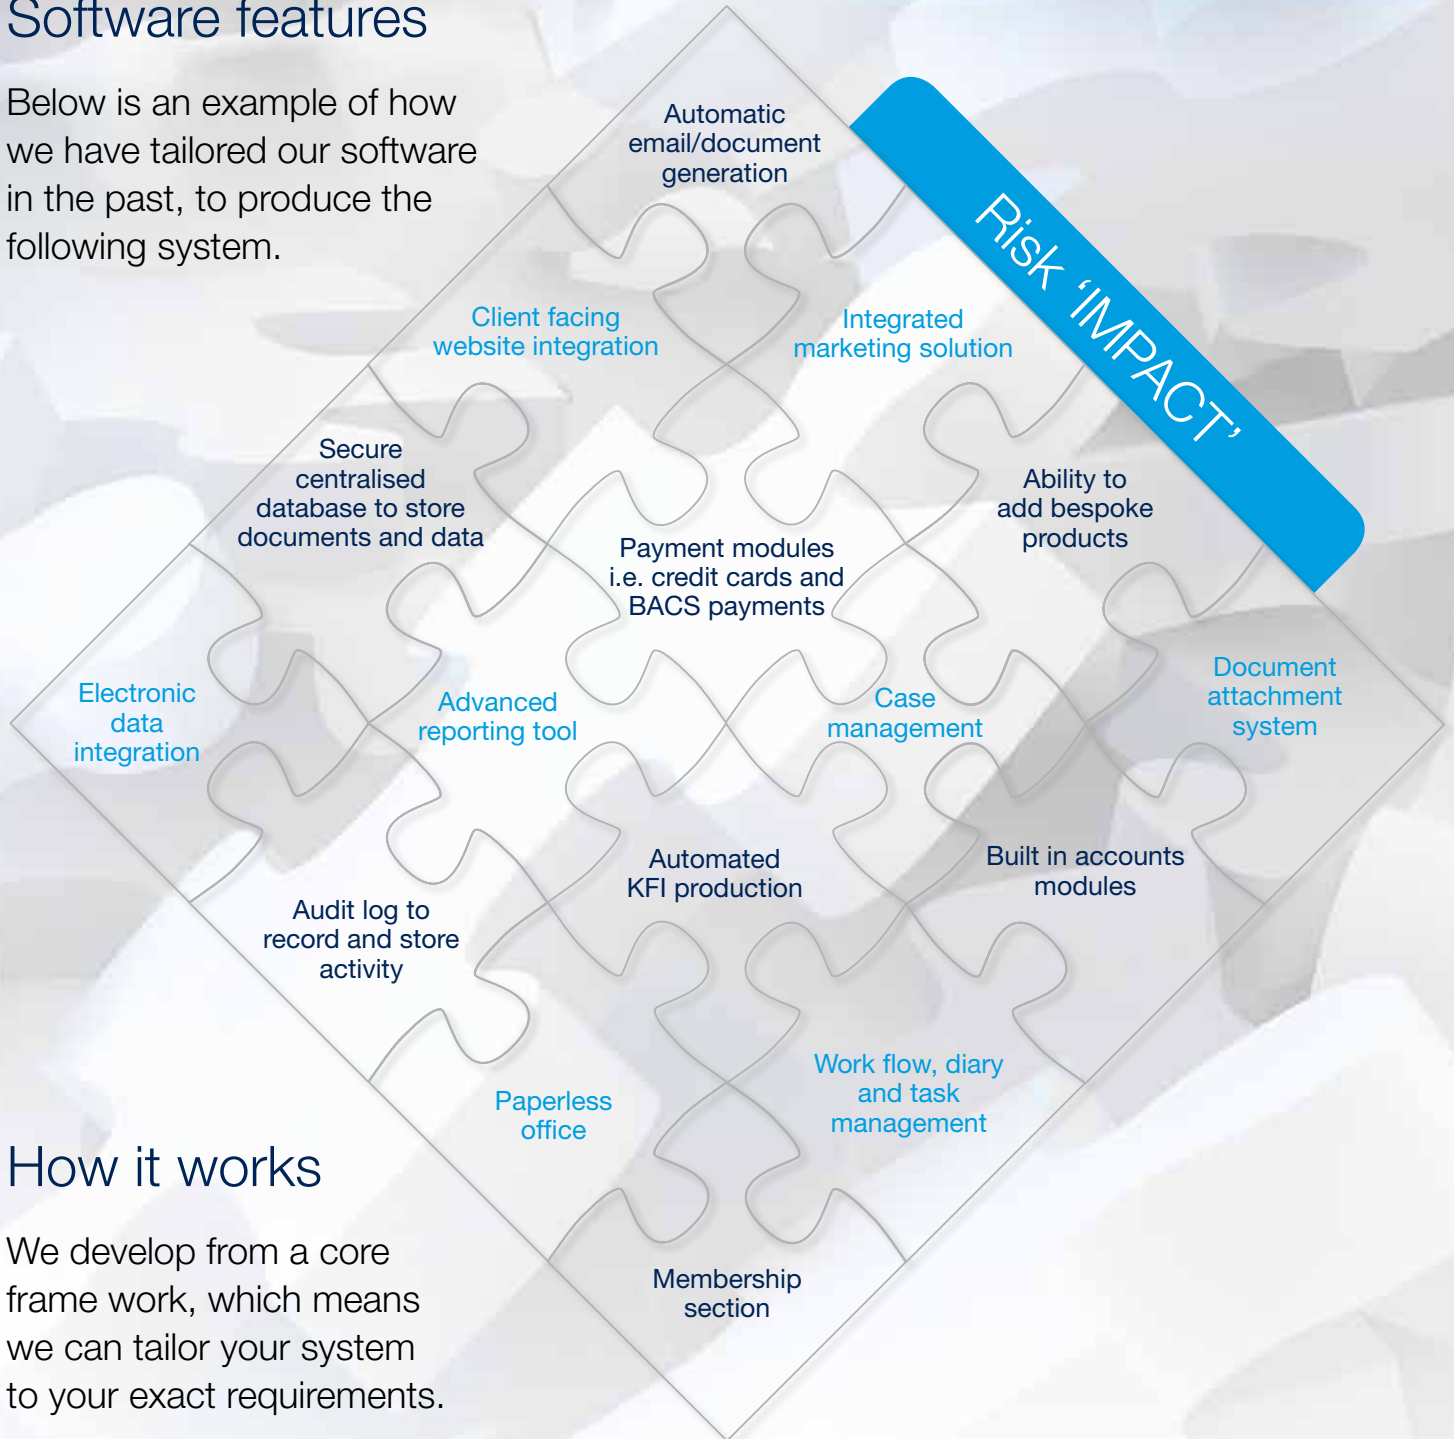

Mortgage Processing Software:

- Mortgage lenders
- Bridging lenders
- Mortgage/insurance brokers
- Networks
- Packagers
- IFA networks

Software features

Below is an example of how we have tailored our software in the past, to produce the following system.

How it works

We develop from a core frame work, which means we can tailor your system to your exact requirements.

Our framework

We already have a system framework in place, which we tailor to your exact needs. This means you do not have to pay a fortune to create a completely new system, and nor do you have to fit your business around a generic off the shelf system. Some of the benefits and features of our framework are included below:

- ✓ Workflow system
- ✓ Compliance modules
- ✓ Letter generation with built in email and print options
- ✓ Document management
- ✓ Full Diary system
- ✓ Payment modules including real time Bacs and Credit card
- ✓ Audit Logs
- ✓ Automatically input standard fees
- ✓ Full Management Information reporting
- ✓ Paperless Office
- ✓ Our software runs in a web browser allowing you to access vital information from virtually any location in the world
- ✓ Visual Studio C# plus RAD frame work for quicker implementation times
- ✓ Secure Microsoft SQL Database that stores data, documents, audit logs and scanned images in one secure place.
- ✓ Web integration modules so that data does not have to be keyed in more than once

We have a framework in place, allowing us to create your perfect system.

We believe in automating what should be automated, but more importantly we listen to what you want.

Why choose us?

Unlike most other Financial Services software companies, we can show you what you should be doing with your IT systems, and then you can decide if it is right for you.

Some of our staff have over 20 years experience in producing financial services software, including systems for some of the UK's largest mortgage lenders. Our software is tried and tested and we have had over 10,000 users of our systems.

Many companies judge themselves on the awards they have won. We go one step further and believe in judging ourselves on the success of our clients, and the proof is in the awards many of our clients have won. Our philosophy is that if our software helps our clients to grow, then we will grow, which is why we can produce the best software at a lower price.

Our award winning customer service has been described as 'the envy of the industry'. We speak English, not computer jargon, so you fully understand what is going on. We believe there is always a solution to a problem. When you contact us you always get to talk to a technical support agent who knows your system inside out.
